# UDesign Release Notes Aug 2021

This UDesign update contains an enhancement to the Gable End options: -

Gable Reinforcement Options

We have introduced Gable Support Reinforced (GSR) for the Gable End. As mentioned in the April release notes, this option will become available once the Gable Support (GS) has been applied.

Once the GS has been applied you can then use the SDG to fix or you can apply manually by right clicking on the Gable End and then use the Eaves Beam menu.

Again, if you have any questions regarding these new options, please call Customer First or our Technical Team.
